

Cambodia biodiversity paper notes – Log rank abundance plots–August 8, 2022

I calculated log rank abundance (figs 1-3) and rank abundance (figs 4-6) at the system level (biomonitoring data), catch level and consumption level.

I labeled the top 7 species in each plot.

I plotted only the top 100 species to make it more readable. There are approx 120 species total.

Curious to hear your interpretations.

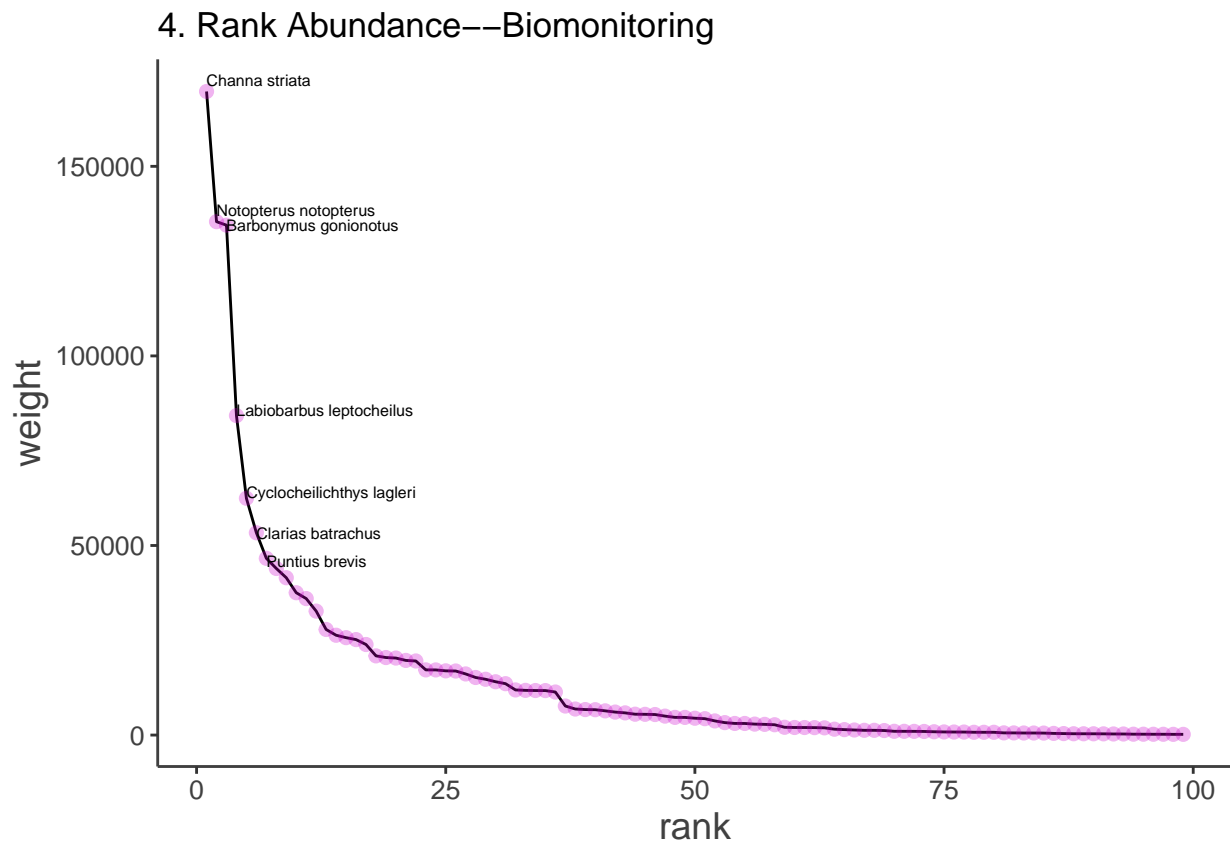

2. Log Rank Abundance--Catch

3. Log Rank Abundance--Consumption

The figures below are not logged and the y-axes are scaled differently

5. Rank Abundance--Catch

6. Rank Abundance--Consumption
